Summary

Entry-level **Associate Cloud & DevOps Engineer** with hands-on experience supporting AWS cloud infrastructure, CI/CD pipelines, Kubernetes deployments, and monitoring systems through academic and personal projects. Skilled in assisting cloud operations, automating deployments using Infrastructure as Code, monitoring system health, and troubleshooting application and infrastructure issues. Actively seeking a **Junior / Associate Cloud or DevOps role** to contribute to production environments and grow into a DevOps or SRE position. Automated server configuration and application deployment using Ansible playbooks across multiple environments Automation scripting using Python & Bash for deployment tasks. Interested in financial systems and scalable infrastructure supporting capital markets. Trained under **Besant Technologies** Rajaji Nagar, Bengaluru.

Skills

Cloud : AWS (EC2, S3, IAM, VPC, EKS, Lambda, CloudWatch)

Containerization & Orchestration: Docker, Kubernetes

CI/CD & DevOps Tools: Jenkins, Git, GitHub, GitLab, SonarQube, CodePipeline, CodeBuild, Artifactory

Infrastructure as Code & Automation: Terraform, CloudFormation, Ansible, Bash, Shell Scripting, Maven

Programming & Scripting: Python, Shell, Linux (RHEL, Ubuntu), Ruby

Monitoring: CloudWatch, CloudTrail, Prometheus, Grafana

Networking: TCP/IP, DNS, HTTP/S, Load Balancing, Subnetting basics

OS: Linux(RHEL, Ubuntu, Kali), Windows

GitOps: Argo CD – declarative deployments, automated sync, rollback, and drift detection

Projects

GitOps-Based Continuous Deployment using Argo CD

Assisted in in implementing GitOps-based Kubernetes deployments using **Argo CD**, enabling automated synchronization and self-healing. Managed declarative application configurations using **GitHub and Helm** as the source of truth. Supported deployment consistency and rollback strategies in **EKS environments**

End-to-End Kubernetes Three-Tier DevSecOps Project | AWS EKS, Docker, Jenkins, Terraform

Deployed an end-to-end three-tier application using React, Node.js, and MongoDB on Kubernetes (AWS EKS) and implemented DevSecOps practices including CI/CD with Jenkins, container management using Docker and Amazon ECR, infrastructure provisioning with Terraform, GitOps using ArgoCD, and monitoring with Prometheus and Grafana, demonstrating hands-on experience in cloud, Kubernetes, and DevOps automation.

Student-Teacher Portal – Three-Tier Application (Docker, React, Node.js, MySQL)

Developed and deployed a containerized three-tier web application for managing student and teacher information using React.js, Node.js, and MySQL. The application follows a modular architecture with separate frontend, backend, and database layers, and was deployed using Docker and Docker Compose for scalability and portability

AWS VPC Design & Automation | Terraform | Infrastructure as Code:

Designed and automated a production-grade AWS VPC from scratch using Terraform — the same architecture used in real enterprise environments. The VPC was built to support a full application stack including web servers, databases, CI/CD tools, and monitoring platforms.

Certifications

AWS DevOps Beginner to Advanced with Projects | Udemy|

AWS Certified Cloud Practitioner | KodeKloud |

Fundamentals of DevOps| KodeKloud |

Education

Master of Computer Application – Computer Science **2022 - 2024**

JNN College of Engineering,

VTU, Shivamogga

Bachelor of Computer Application – Computer Science **2019 - 2022**

PES Institute of Advanced Management Studies,

Kuvempu University, Shivamogga
